Driving SDK

Zero Hardware Cost. **100% Behavioral Logic.**

Accelerometer

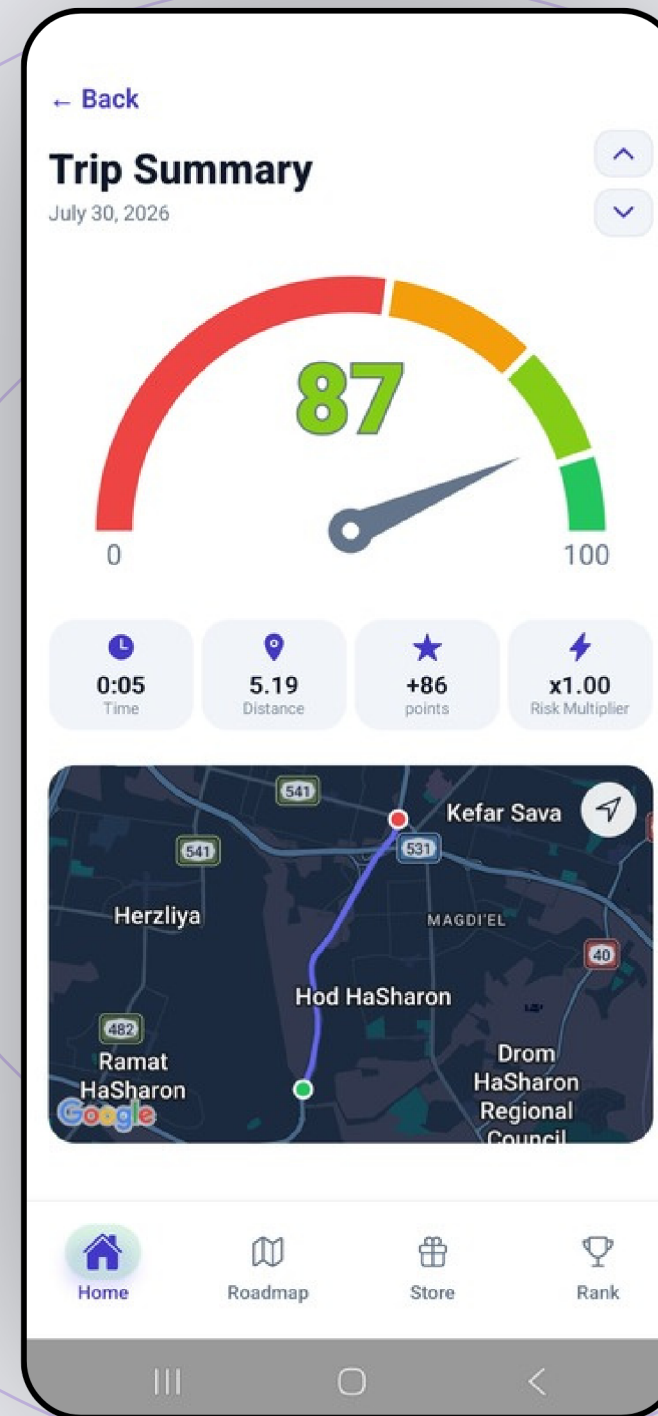

Gyroscope

GPS Monitor

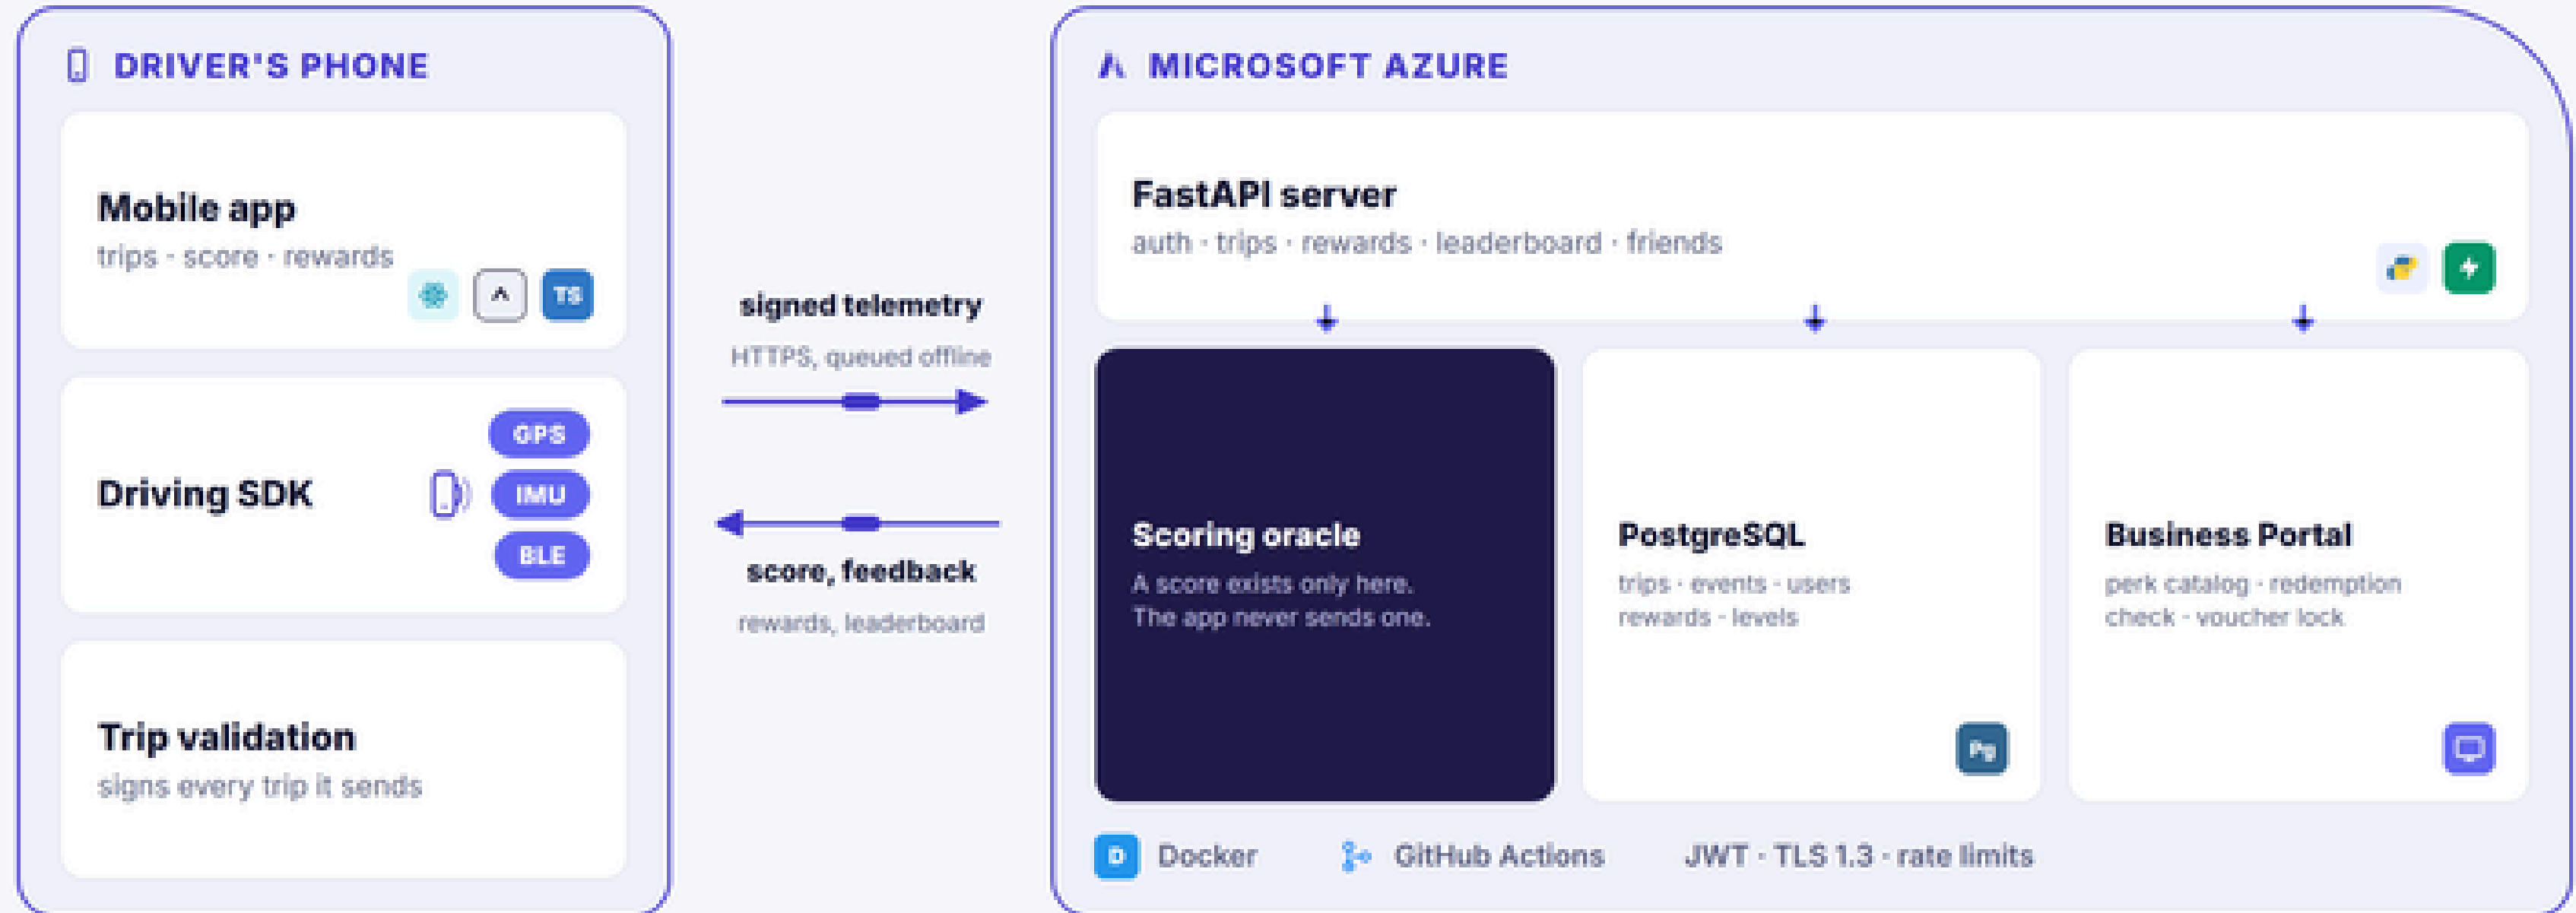

App Shield

ARCHITECTURE

Three Systems, One Score

No extra hardware. The phone measures, the server scores.

The score exists **only on the server**, the phone can request it but never set it.

Algorithm Validation

Paired Trips, Same Route

Each route driven twice, once aggressive, once smooth and safe, with a human observer logging every real event.

× AGGRESSIVE DRIVING

38

Hard braking events and phone handling flagged throughout the route.

☆ SMOOTH, SAFE DRIVING

97

Same route, clean inputs end to end. No penalized events logged.

RESULT

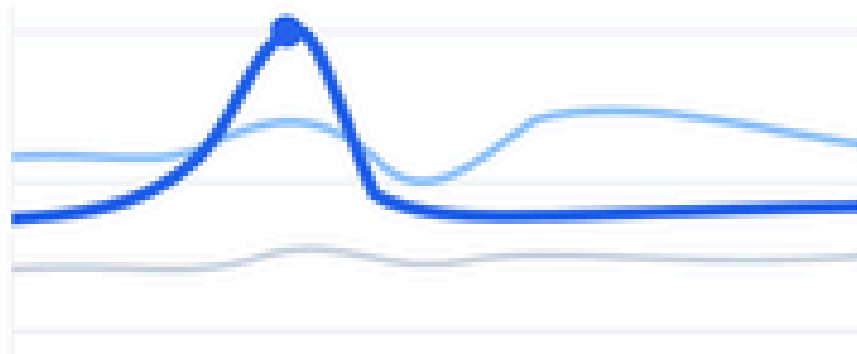

The system **caught the difference precisely**: a near-perfect score for clean driving, a heavily penalized score for the same route driven aggressively.

CORE TECHNOLOGY

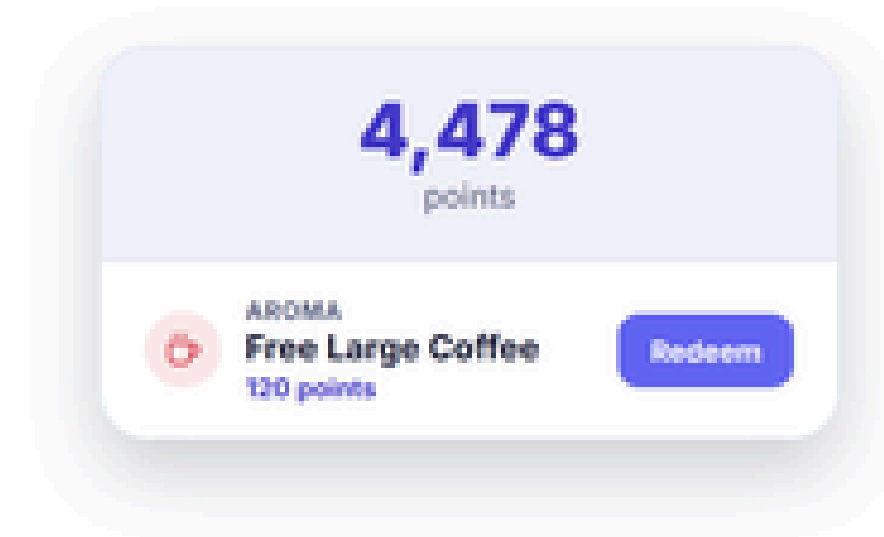

Scoring Engine

From Telematics Research to Economic Value

PHYSICS & TELEMATICS

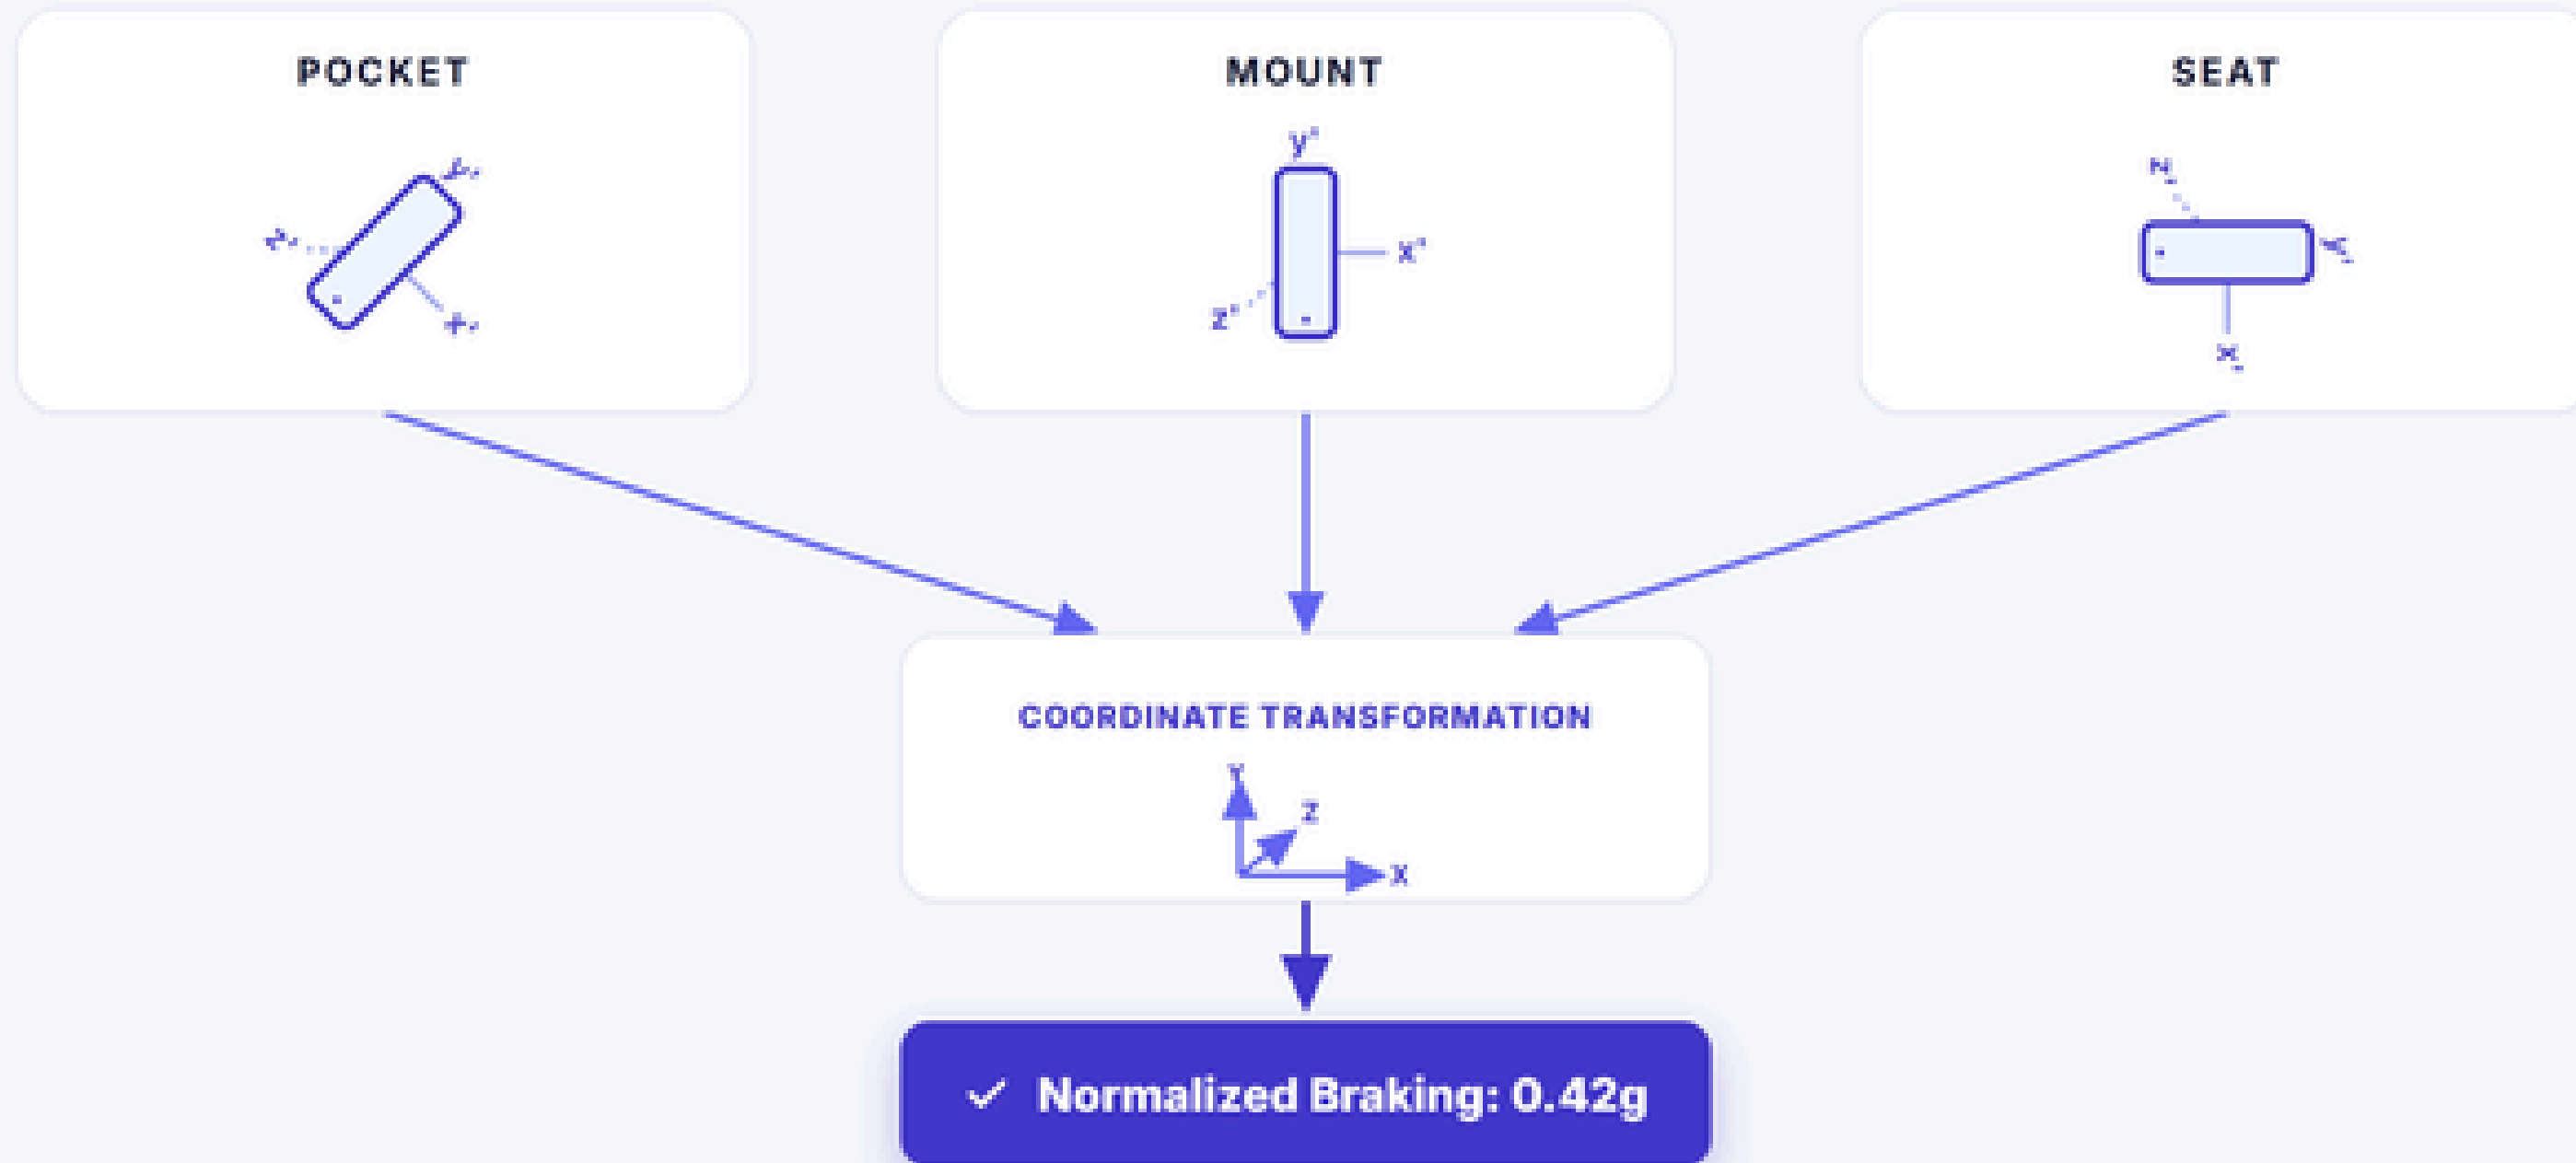

REAL COMMERCIAL VALUE

Precision isn't just a technical metric. **It protects the business model.**

Any Angle, Same Truth

Orientation-Independent Event Detection

The phone moves. **The signal doesn't.**

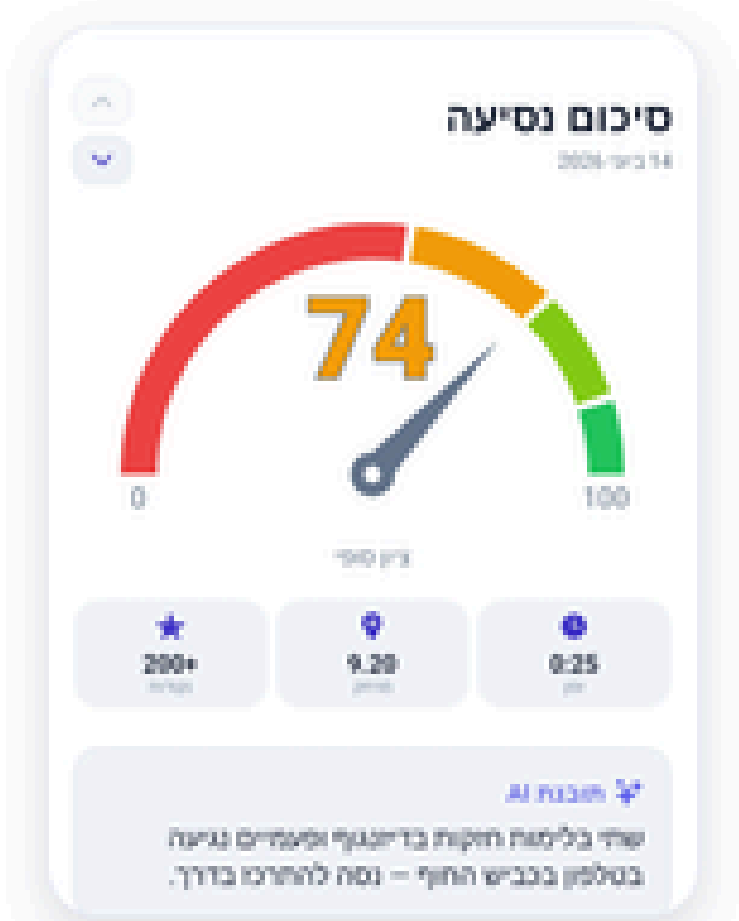

Score Integrity & AI-Native Build

Device Integrity

```
payload: { g: 0.42, t: 1725546000 }  
sig: HMAC-SHA256(...)
```

Cryptographically signed on-device before sync.

Real-Time AI Coaching

Live score and AI feedback, every trip.

Trusted data. **AI-native build.**

COMPARISON

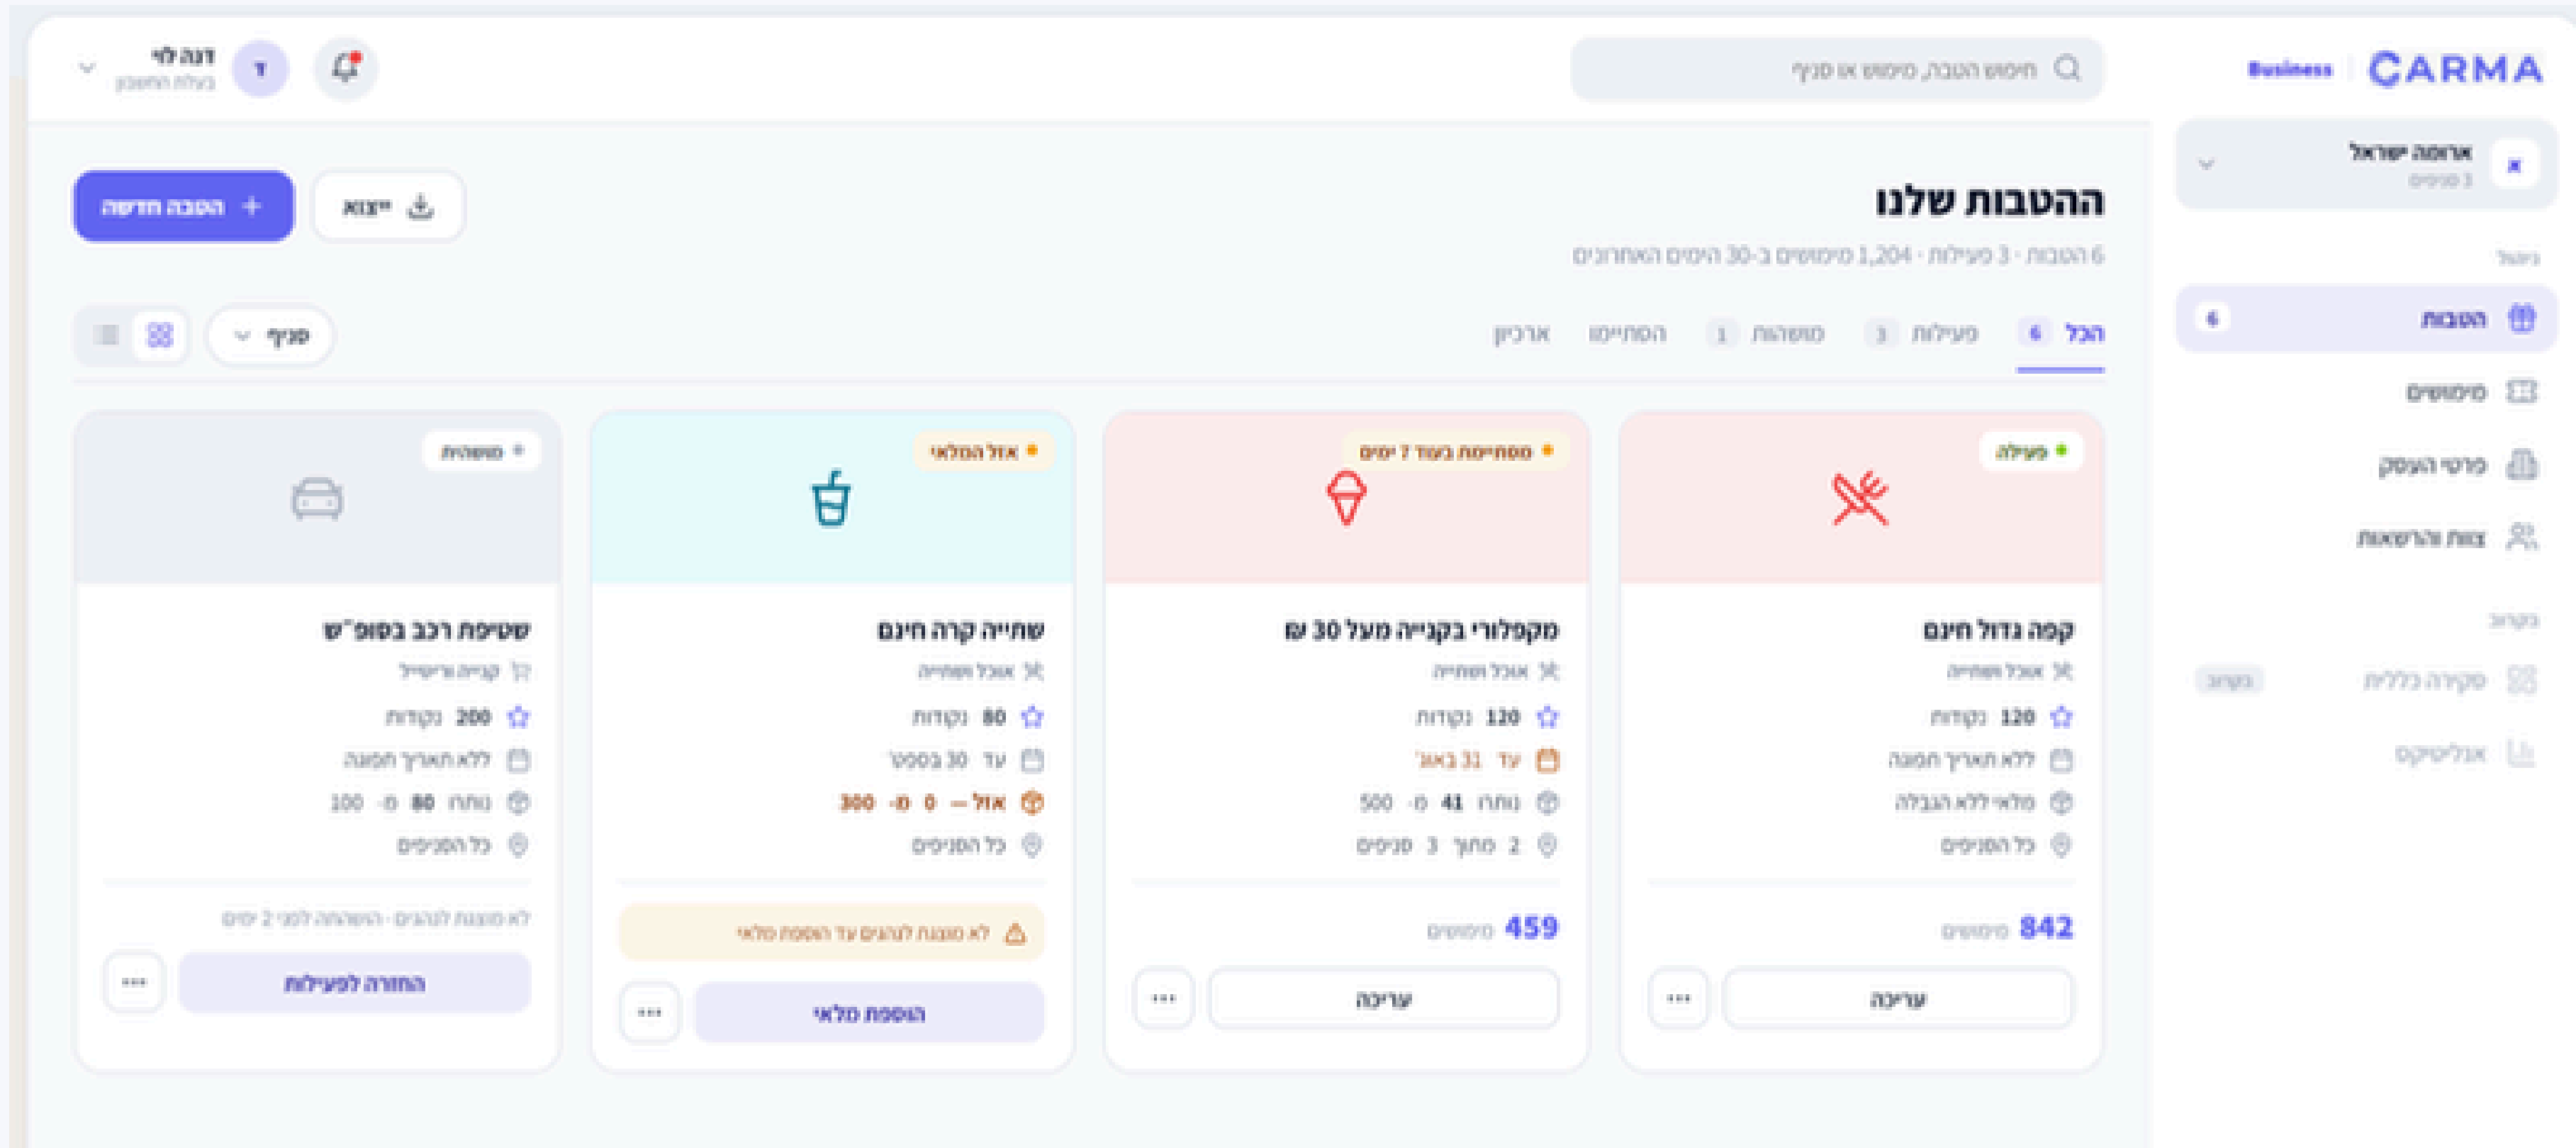

Strategic Competitive Landscape
